

GAURAV SURYAVANSHI

Software Development Engineer in Test (SDET)

Pune, India • +91 9075259103 • gauravsuryvanshi06@gmail.com

SUMMARY

SDET with 2+ years building and owning API test-automation frameworks for large-scale health-insurance claims systems. Strong in Java 17 + TestNG + Rest-Assured, Oracle SQL/PLSQL data validation, and Spring Boot / Node.js service testing. Comfortable designing test strategy from scratch, driving partner-integration coverage, and wiring suites into CI.

TECHNICAL SKILLS

Test Automation: Rest-Assured, TestNG, JUnit, Selenium, Postman, Bruno, API contract & regression suites, data-driven & parallel execution

Languages: Java 17, JavaScript/TypeScript, Python, SQL/PLSQL, C++

Backend / Services: Spring Boot, Node.js, Express, NestJS, REST APIs, SSE, JWT auth, microservices

Databases: Oracle SQL/PLSQL, MongoDB, SQLite — query-level assertions, EBR / blue-green validation

Tooling & CI: Git, GitHub, Docker, Maven, CI/CD pipelines, ELK, JSON/HAR-driven test tooling

PROFESSIONAL EXPERIENCE

Software Development Engineer in Test (SDET) | Vidal Health TPA — Pune 2024 – Present

- Own and extend a **Java 17 + TestNG + Rest-Assured API automation framework** for health-insurance claims processing, covering end-to-end claim, enrollment and partner-integration flows.
- Designed and automated a partner-integration **regression suite of 190+ test cases across multiple REST APIs**, with request/response schema validation and database-level assertions.
- Built and tuned **TestNG suites for parallel execution**, reducing regression run time and stabilising CI feedback across release cycles.
- Authored functional and **data-validation test scenarios backed by Oracle SQL assertions** for bulk data-upload and partner MIS reporting workflows.
- Designed test coverage for **database migration and blue-green deployment patterns**, and validated real-time (SSE) claim-processing workflows.
- Partnered with developers to reproduce, triage and close backend defects, improving release quality and QA-to-engineering turnaround.

Backend Automation Test Intern | Bajaj Finserv Health 2024

- Built a microservice to automate API testing by generating and executing curl commands from HTTPS response logs pulled off the ELK stack.
- Migrated the service from Node.js to **NestJS** for better performance and scalability.

Backend Developer Intern | Esenceweb IT Solutions 2024

- Developed backend services in Node.js/Express with MongoDB, JWT auth and real-time messaging via Socket.io; integrated a Dialogflow chatbot for automated responses.

PROJECTS

Generic Dynamic Journey Builder | Java · Node.js · HAR parsing

- HAR-file-driven framework that parses Chrome DevTools exports and replays REST workflows with dynamic variable extraction, dependency chaining and assertions — turning captured user journeys into repeatable automated API tests.

JSON-Driven API Sequencing Engine | Node.js · Express · SSE

- Config-driven engine that orchestrates chained API calls with retry/polling, SSE streaming and a visual builder UI for composing and running test sequences.

Wildlife Conservation Analysis (Honors) | Python · YOLOv5 · Inception V3

- Computer-vision pipeline to count wildlife populations from images/video and classify species against IUCN Red List criteria. Copyright-registered.

EDUCATION

Bachelor of Engineering — CSE | PCCOER, Pune

Aug 2020 – May 2024

CGPA: 8.96 / 10
